

CAPABILITIES OVERVIEW

Identity governance, security controls, and audit-ready evidence

Project-based advisory support for organizations that need practical IAM, governance, risk, control, evidence, and remediation guidance.

Enterprise-informed security governance without unnecessary complexity or unsupported assurance claims.

Identity governance

Lifecycle controls, access reviews, ownership, entitlements, RBAC, least privilege, and application onboarding.

Audit readiness

Evidence quality, control walkthrough preparation, traceability, remediation tracking, and documentation.

Security governance

Control design, policies, procedures, operating models, risk translation, and practical roadmaps.

ADVISORY AREAS

What TechNerd Consulting can support

IAM and IGA advisory

- Joiner-mover-leaver governance
- Access-review design and remediation
- Application ownership and onboarding
- Entitlement and role-governance analysis
- Least-privilege and access-risk roadmaps

Audit readiness and evidence

- Evidence-quality and traceability review
- Control narrative and walkthrough preparation
- Finding and remediation tracking support
- Ownership and scope clarification
- Readiness recommendations

Control and remediation advisory

- Control objective and scope review
- Design and operation gap analysis
- Closure criteria and verification planning
- Exception and residual-risk documentation
- Recurrence and sustainment considerations

Policies, procedures, and standards

- Policy architecture and supporting standards
- Procedures and operating guidance
- RACI and accountability models
- Governance templates and checklists
- Technical and executive-ready writing

Security program development

- Current-state and maturity reviews
- Governance metrics and reporting concepts
- Prioritized improvement roadmaps
- Cross-functional workshop facilitation
- Practical implementation planning

Cloud and application governance

- Ownership and accountability review
- Access and certificate governance
- Exception and remediation workflows
- Application inventory and governance criteria
- Documentation and handoff support

ENGAGEMENT APPROACH

Clear scope, useful deliverables, and explicit limits

Possible engagement formats

- Focused consultation
- Defined-scope governance review
- Documentation or template package
- Workshop or stakeholder session
- Prioritized roadmap and action plan
- Project-based advisory support

Typical deliverables

- Findings and observations
- Risk and control context
- Ownership and dependency map
- Evidence and documentation guidance
- Remediation priorities and closure criteria
- Implementation-ready next steps

Scope is confirmed before work begins. Deliverables, access needs, responsibilities, timing, pricing, assumptions, and exclusions should be documented for each engagement.

Professional boundaries

TechNerd Consulting provides advisory, documentation, education, and implementation-support services. These services do not constitute an independent audit, attestation, legal opinion, compliance certification, or guarantee of security. Emergency incident response, 24/7 monitoring, and formal certification services are not represented as current offerings.

Remote consultation available

Limited consultation requests are currently open. Start with a concise description of the problem, desired outcome, timeline, and relevant constraints.

EXPERIENCE FOUNDATION

Built from verified enterprise IAM and governance work

20+

years of IT experience

~7

years supporting
enterprise IAM at Nike

70K-80K

users in the enterprise
environment

10K+

external identities in a
major governance
initiative

Selected experience

- Identity governance, access certification, lifecycle controls, application onboarding, entitlement governance, and RBAC support.
- Primary IAM audit-liaison responsibilities including walkthroughs, evidence coordination, responses, and remediation tracking.
- Approximately 15-20 enterprise application onboardings across the IAM career.
- SailPoint IdentityIQ, Active Directory, Microsoft Entra ID, ServiceNow, PowerShell, SQL, Excel, Workday, and Azure governance exposure.

How this experience is used

- Translate technical access data into ownership and governance decisions.
- Distinguish activity records from evidence of intended outcomes.
- Help teams design practical, supportable controls.
- Make risks, limitations, and remediation priorities understandable to technical and business stakeholders.
